PROFILE

Software Developer with a background in Computer Science and Artificial Intelligence. Adept at leveraging Python, SQL, and structured problem-solving across the full Software Development Life Cycle (SDLC). Proven track record of building scalable full-stack applications, integrating multimodal AI and Machine Learning (ML) frameworks, and translating complex requirements into high-performance, data-driven software solutions.

EDUCATION

B.Tech in Computer Science (Artificial Intelligence)

Galgotias College of Engineering and Technology

2022 – 2026

Greater Noida

XII & X

St. Francis

SKILLS

Frontend Development

HTML5, CSS3, JavaScript

Backend Development

Flask, FastAPI, REST API Development, JSON

AI/ML

NLP, OpenCV, TorchVision, PyTorch, NumPy, Pandas

Databases

SQL, MySQL, CRUD Operation

Tools & Platforms

Git, GitHub, VS Code, Jupyter Notebook

Core CS

DBMS, Operating Systems, Computer Networks, System Design

PROJECTS

AI Powered Multimodal Rumour and Misinformation Detection system

- Built an end-to-end text classification pipeline using Python, NLP, TF-IDF, and supervised ML to detect Rumour vs Non-Rumour content on social media with an accuracy of 86.71% enabling **automated content moderation** that reduces manual verification effort.
- Applied text preprocessing (tokenization, stop-word removal, lemmatization) and feature engineering using unigrams & bigrams to handle **unstructured, noisy data**, mirroring real-world social media environments to protect **brand integrity**
- Dataset Description The system utilizes the Fakeddit dataset, which is a large-scale multimodal dataset derived from Reddit.

INTERESTS

Full-Stack & Data Exploration: — Enthusiastic about transforming raw ideas into functional web applications and writing scripts to scrape, clean, and analyze datasets to uncover actionable insights. |

Interactive Side Projects: — Crafting quick mini-games and automation scripts to explore creative logic, practice user interface design, and turn downtime into coding practice.
